VOLATILE ORGANIC COMPOUNDS

What you need to know

With the potential to disperse over great distances, Volatile Organic Compounds (VOCs) have become a major contributor to global air pollution. When VOCs are released into the atmosphere, they react with nitrogen oxides (NO_x) to create ozone molecules which irritate the eyes, nose, and throat, and can aggravate asthma and other lung diseases. Even though VOCs, by definition, are volatile, a significant number are actually quite persistent in the environment. This persistence coupled with the fact that they are found in many household and industrial products, including fuels and paints, result in vast reservoirs of these pollutants in soils and wastewaters, with some VOCs causing long-term adverse health effects to our populations.

Additionally, the presence of VOCs in such a wide-ranging and far reaching range of household and consumer products such as indoor paint, cosmetics and cleaning supplies, has led to an increasing concern for indoor air quality. In Europe and North America, the average adult spends over 80% of their life indoors, whilst rooms are getting smaller and less well-ventilated – leading to higher risks to human health, associated with VOCs.

As studies into the long-term effects of VOCs gain traction and concerns about the potential harm to both the environment and the world's population increase, global regulation bodies are responding. There are an ever-growing number of emission controls, product specification, monitoring and remediation plans associated with VOCs, and organisations such as the European Union (EU), Environmental Protection Agency (EPA) and Standardization Administration of China (SAC) have set out guidelines and criteria for residue monitoring, and established the range of substances to be tested.

Reliable analytical testing is needed to underpin this tightening regulation and control, and to monitor the impact of attempts to clean up the environment. Whichever regulations and methods inform your analytical testing, it is essential to use reliable reference materials appropriate for your selected methods.

Our Dr. Ehrenstorfer range of VOC reference materials has been specifically designed to support you in the enforcement of global regulations acting against VOCs in our environment. In particular, we have standards to address EPA Method 8260, EPA Method 8270, EC 1223/2009 and more. With all measurements on our certificate of analysis carried out in accordance with ISO 17025 and a majority of products produced under the scope of our ISO 17034 accreditation, we guarantee the highest quality reference materials.

On the following pages you will find a selection of our VOC products laid out to help you identify your many Dr. Ehrenstorfer product options for a specific analyte. Our neat reference materials enable you to tailor the scope of your testing, so you can respond quickly to changes in regulation and keep pace with demand. Our prepared solution standards minimise chemical handling required in the laboratory and reduce the time and effort needed to prepare your own solutions. This is particularly useful when you're testing against established regulatory requirements.

Many additional products are available from LGC and Dr. Ehrenstorfer in a range of formats. Visit [lgcstandards.com](https://www.lgcstandards.com) to explore our full and extensive range of available VOCs reference materials or **contact us** to discuss your exact needs.

If you're looking for pre-prepared solutions and mixtures but can't find what you need, we can help. Our customised standard preparation service for solutions and mixtures provides a high-quality product that's tailored to you.

VOLATILE ORGANIC COMPOUNDS (VOCs)

Dr. Ehrenstorfer has an extensive range of neat, single solution and multicomponent solution products for the analytical testing of VOCs. On the following pages you will find an index of selected analytes to help you explore the range and find the products you need for your analysis.
